

Challenge Formulation

```
graph TD; A[Challenge Formulation] --> B[Questions | Scenario Definition]; B --> C[Experiment / Benchmark / Benchmarking Competition Definition]; C --> D[Experiment / Benchmark / Benchmarking Competition Execution]; D --> E[Answers]; D --> F[Analysis of Experimental Data]; F --> E;
```

The flowchart illustrates a five-step process for challenge formulation. It begins with 'Challenge Formulation' (red box), which leads to a split box containing 'Questions' (grey) and 'Scenario Definition' (orange). Both of these lead to 'Experiment / Benchmark / Benchmarking Competition Definition' (green). This step leads to 'Experiment / Benchmark / Benchmarking Competition Execution' (blue). From the execution step, the process branches into 'Answers' (grey) and 'Analysis of Experimental Data' (pink). Finally, the analysis step feeds back into the 'Answers' step.

Questions

Scenario Definition

**Experiment / Benchmark / Benchmarking Competition
Definition**

**Experiment / Benchmark / Benchmarking Competition
Execution**

Answers

**Analysis of
Experimental Data**
